EMIR UÇGUN

iOS & Mobile Developer — Computer Engineering Student

Turin, Italy · emirucgun@gmail.com · github.com/Emirucgun · linkedin.com/in/eucgun · emirucgun.com

Italian residence permit (student) — authorised to work up to 20 hours/week during term. Open to internships and part-time roles.

PROFILE

Computer Engineering student at Politecnico di Torino (expected graduation 2028) and iOS developer. Interned at Flo in a six-person iOS team, delivering two complete apps and working daily in an agile, code-reviewed workflow. Comfortable across the iOS stack: UIKit and SwiftUI, REST and LLM integration, and custom real-time audio.

EXPERIENCE

iOS Development Intern — Flo (Istanbul, Türkiye) Jul 2026 – Aug 2026

30 working days, full-time

- Built two complete iOS applications end to end, starting in UIKit with Storyboards to match the existing production codebase and moving to SwiftUI as the team began its migration.
- Worked in a six-person iOS team — three mid-level iOS developers, a senior engineer, a product manager and a lead overseeing both the iOS and Android teams — inside a cross-functional agile group.
- Joined daily standups, task breakdown and code review with the senior engineer, and took part in the app update and release cycle.
- Used LLM-assisted workflows for ideation, architecture planning and code generation; reviewed and validated generated code before integration.

PROJECTS

White Noise github.com/Emirucgun/wn0 ↗

SwiftUI · AVAudioEngine · MVVM · 2026

- Focus and sleep app built on a multi-channel procedural ambient mixer, using custom *AVAudioSourceNode* blocks for real-time DSP.
- Binaural-beat frequency layers driven by a Pomodoro timer that cross-fades between focus and rest states; MVVM with singleton audio and display managers.
- SwiftUI interface with glassmorphic materials and procedural animation, plus an OLED-safe low-luminance overnight display mode.

Ghosted github.com/Emirucgun/Ghosted-App ↗

UIKit · Storyboards · Groq LLM API · 2026

- Conversation-exit assistant: the user pastes an incoming message and receives an AI-generated, polite way out, powered by Groq LLM inference.
- UIKit with Storyboards and programmatic UI; local persistence of usage streaks in UserDefaults.

Harmonica Tuner github.com/Emirucgun/harmonica-tuner ↗

React Native · Expo · Native audio bridge · YIN pitch detection · 2026 · write-up on Medium ↗

- Real-time pitch detection app for 10-hole diatonic harmonicas: maps the detected note to hole number and blow/draw action, and shows deviation in cents.
- Bridged Android's native *AudioRecord* to the JavaScript thread for low-latency PCM streaming, with the YIN algorithm for fundamental-frequency estimation.

SubSafe React Native · published on Google Play

- Offline subscription-management app published on Google Play, with a local-first data architecture and no cloud dependency.

SKILLS

iOS: Swift, SwiftUI, UIKit, Storyboards, Xcode, App Store release workflow

Cross-platform: React Native, Expo, Flutter / Dart

Languages: TypeScript, JavaScript, Python, C, SQL

Backend & data: Supabase (PostgreSQL, RLS), Firebase, REST APIs, local-first storage

AI integration: OpenAI, Gemini, Groq, Whisper; LLM-assisted development workflows

Tools: Git / GitHub, Figma, Blender, Godot

EDUCATION

Politecnico di Torino — BSc, Computer Engineering 2024 – expected 2028

OTHER

Google Developer Student Clubs (GDSC) — Core Member & Event Coordinator, 2023–2024. Co-organised a technology summit for 100+ students and ran 5+ technical workshops.

Languages: Turkish (native), English (B2 — IELTS 6.5), Italian (elementary / A2).
